

2014 ANNUAL REPORT

WE'RE READY

**TO
WORK**

WE'RE READY

TO ACTIVATE CHANGE

With pride we announce that, over 44 years, NatureBridge has connected over 1 million participants to the wonder and science of our world's most impressive landscapes—our national parks.

And with vision we declare: this is not enough.

How can we fix the world's growing environmental challenges when the next generation is not connected to nature or equipped with the science skills to protect it? It's simple. We prepare them. With your help.

Guided by our broadened mission, our strategic plan is the blueprint to achieve this goal. You will find more details of our plan on the pages that follow and can learn more about our visionary axiom: be excellent, build the field. (See pages 4 and 5.)

We're also thrilled to announce that our National Environmental Science Center in Yosemite National Park is now under construction. This ambitious \$56 million project will provide a permanent home for environmental science education and research, complete with a breathtaking view. We need your help to open the doors and are actively seeking leadership donations. Learn more about the project and how to help on page 7.

As you can see, NatureBridge is stepping up—in a big way. We are elevating the importance of environmental science learning for our communities, our education system, and our planet.

To do so, we're delivering exceptional environmental science in nature's classroom and supporting innovations and other organizations that advance literacy of our natural world.

We're ready to activate change. Are you?

Thank you for challenging us to dream bigger. With your ongoing support, we can help inspire and empower the environmental stewards of tomorrow.

With gratitude,

Jason Morris
INTERIM PRESIDENT & CEO

David G. Brown
CHAIR, NATIONAL BOARD OF DIRECTORS

OUR NATIONAL PARK CLASSROOMS

Our multiday environmental science programs offer:

1971

Yosemite National Park

- Glaciation while hiking glacier-formed waterfalls
- Ecological relationships from the perspective of a 2,000-year-old giant sequoia tree
- Geology laid bare along granite monoliths and domes

1977

Golden Gate National Recreation Area

- Watershed ecology through examining macroinvertebrates in local ponds
- Adaptations of tide pool creatures in an intertidal marine touch tank
- Climate change and phenology while tracking plant cycles throughout the year

1988

Olympic National Park

- Environmental restoration and recovery following dam removal on the Elwha River
- Climate trends and their impacts on local species
- Old-growth temperate rainforest and alpine peaks

2010

Santa Monica Mountains National Recreation Area

- Biogeography in action in the rare Mediterranean ecosystem
- Stewardship and conservation through litter analysis and phenology
- The Arroyo Sequit watershed from its start near Sandstone Peak to where it meets the ocean

2011

Channel Islands National Park

- Marine ecosystems while collecting data on marine protected areas
- Endemic species found only in the Channel Islands
- Ancient and ongoing processes of plate tectonics

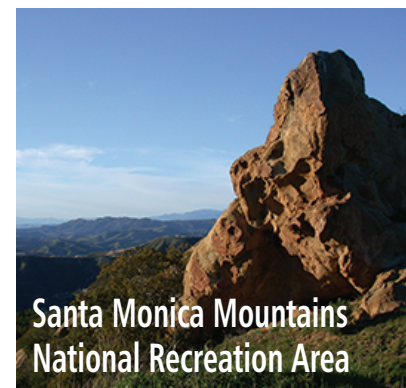

2012

Prince William Forest Park

- The largest protected piedmont forest in the Chesapeake Bay watershed
- Impacts of urbanization on forest streams and watersheds
- The great diversity of natural life just minutes from Washington, D.C.

Yosemite National Park

Santa Monica Mountains National Recreation Area

Golden Gate National Recreation Area

Channel Islands National Park

Olympic National Park

Prince William Forest Park

STRATEGIC PLAN

“At NatureBridge our students grow as learners, scientists, environmentalists, friends, and people. They develop skills, confidence, and vision that is hard to cultivate solely in a typical classroom.”

—Erin Bailey, Teacher

WE'RE READY

TO BE EXCELLENT

At NatureBridge, the way we work is just as important as the work we do

Through our multiday programs, diverse participants can experience nature for the first time. They discover, awaken curiosity, and build a rich understanding of science and the environment.

Our programs integrate math, art, language, and wellness, inspiring future scientists, building self-esteem, and developing skills needed to create healthy communities and a healthy planet.

But it's not just the students who practice science—we *do*, too. Through rigorous evaluation and assessment, we ensure our programs are the best they can be.

Our ambitious three-year strategic vision reflects a continued commitment to internal and external excellence through quality, reach, diversity, and influence.

We will:

- Create compelling content and science-based curricula that target students' academic achievement, personal growth, and interpersonal skills to build environmental literacy.
- Capitalize on opportunities provided by natural landscapes in our stunning national park outdoor classrooms.
- Establish a culture of innovation and an agile system of program design, delivery, and review.
- Build and ensure efficient, effective business and operational systems.
- Cultivate leadership in a strong staff team, inspired by a shared vision for the diverse communities and students we serve.

STRATEGIC PLAN

“There is nothing more important to sustaining ourselves and our planet than getting kids outside to learn, be active, and connect with the world around them—and I know that NatureBridge is playing an important role in making that happen.”

—Sally Jewell, United States Secretary of the Interior

WE'RE READY

TO BUILD THE FIELD

While what we can do individually is impressive, what we can do together is truly transformational.

The field of environmental education has a history of detached efforts. At NatureBridge, collaboration is our calling. By convening with experts, we're working to integrate environmental education in the formal education system and advance opportunities for young people outside of the classroom—before it's too late.

We've already hit the ground running. We've stepped up as a leadership partner in ChangeScale—a pioneering venture for environmental literacy that's united influential institutions and organizations across the Bay Area. And that's just the beginning.

We will:

- Advance the long-term aim of integrating the field of environmental education with formal education.
- Ground our programs, research, and evaluation in science—and chronicle the value of environmental education.
- Position NatureBridge to become the recognized center for research-based programming and citizen science data in residential environmental education.
- Provide greater access to NatureBridge programs by providing scholarships to one-third of our students.

“Between every two pines is a doorway to a new world.”

—John Muir

2014 HIGHLIGHT:

National Environmental Science Center in Yosemite National Park

Environmental science education reimagined

The future of environmental science education begins with our project in Yosemite: the National Environmental Science Center. Creating the next generation of environmental stewards isn't just a goal—it's at the very core of our existence.

It's been a topic around campfires and in leadership meetings over the last 35 years. And now? Our state-of-the-art environmental science center at Yosemite National Park is under construction.

A resounding example of our strategic plan's adage "be excellent, build the field," the National Environmental Science Center will provide a permanent home for environmental science programs in Yosemite that will showcase the wonder of our natural world for young people across the nation.

The need couldn't be more urgent. Today, children and teens suffer from nature deficit disorder, spending less than seven minutes outside each day. At our center, students and community members will spend at least eight hours a day on nature and science learning—in the heart of one of our country's iconic outdoor landscapes.

A global model for field-based learning, the center will significantly increase the current capacity for year-round field science programs for children and teens. Multiday residential science programs at the NatureBridge center will provide space, tools, technology, and educators to inspire curiosity and confidence.

Grounds will include cabins for students, classrooms, a library, a dining hall, bathhouses, and more. The center will serve as a laboratory for environmental education best practices, convene thought leaders, and spark innovation.

There, kids and guests alike can learn and dream—shaping their own campfire ambitions that will form tomorrow's future.

Learn more at: naturebridge.org/NESC

"For a national treasure like Yosemite National Park to have a center that is solely designed for environmental science education, the importance of our work will be elevated around the world."

—Jason Morris,
Interim President &
CEO of NatureBridge

Fundraising for the center is just beginning. To find out how you can be involved and support our \$56 million effort for the National Environmental Science Center in Yosemite National Park, contact jmorris@naturebridge.org.
